

OLBIA
STONE

Olbia Stone is located in Antalya, Turkey and has worked in mining sector for a period exceeding 15 years with its experienced and qualified staff.

As stone specialists we are very experienced at helping architects, designers, developers and their clients create the desired look and feel for any residential or commercial project. We work with the more common stones such as travertine, limestone, marble, sandstone, slate and granite but we also regularly work with less common stones such as basalt, andesite, diabase, antique colours such as brown, grey, yellow, black, maroon and onyx.

Our promise to you is that we will ensure that whatever your project, we're able to offer the right stone for the job, in the size, colour and texture you require and to a quality that is unequivocal.

Our standard products and sizes are available to view on our website but this range doesn't do justice to the hundreds of different stones we supply and the bespoke sizes they can be supplied in as special orders.
