

*WHO TAKES CARE OF  
YOUR SENSITIVE AVIATION  
REVERT MATERIAL?*

***WE DO!*** *INTERESTED?*

*Specialty Metals Group*

***CRONIMET***

# Service of Aviation Destruction

*CRONIMET Speciality Metal Group (SMG) has a comprehensive industry approved process that ensures timely, documented & reliable processing of your sensitive aviation parts.*

## Documented Destruction Process

*We take care of your sensitive aviation parts (e.g. Life limited parts, LLP's) and your prototype materials. We ensure that your material will be destroyed before we recycle it and bring it back to the environmental circle.*

*With our process you have the guarantee that suspected unapproved parts (SUP) will never reenter the market. Our whole process has clear interfaces, responsibilities and is subject to a detailed documentation. The result is a consistent process with a certificate of destruction and viable outlets for revert material after destruction.*

***We can offer you holistic approaches for your MRO facilities.***

## Our Service

*We offer you an integrated service for the handling of sensitive revert material. **That means:** The recycling and processing of superalloy, corrosion and heat resistant, cobalt and titanium based alloy scrap from the aviation industry.*

### **IN SHORT WORDS:**

- *Revert management of aviation scrap solids*
- *Toll processing and destroying of scrap solids*
- *Stockholding of all common grades of high-temperature and corrosion-resistant alloys prepared for vacuum and airmelt applications*
- *Price-, risk-, stock- and logistics management for our customers*
- *Hedging and financing solutions*
- *Secure scrap collection with customized containers and processing of sensitive aviation parts*

## SMG // State-of-the-Art Concept

*We offer you a global one-stop solution for aviation destruction and materials management. Our developed process is under the guidance and procedures of ISO 9001:2015, certified waste management company (according to §§56 and 57 Waste Management and Product Recycling Act), AFRA BMP and all aviation destruction standards. We start with the secured collection of parts and proceed with transportation, documentation, destruction and End-of-Life Management. Our destruction methods include individual Material Serial Number (MSN scrap) and bulk scrap destruction. After verifying the delivered part list the material destruction is part specific (piece by piece). Destruction methods are supplier specific and in line with aviation industry standards to render the parts unusable. At the end of the customized process you will receive a certificate of destruction before we start with the beneficiation process.*

***We guarantee a legally secure service.***
