VOCTOR

- VoctoR is a virtual clinic
- Virtual Reality - Mobile Mediated Healthcare Solutions for Physiotherapy and Psychiatry/ Psychology

VOCTOR PSYCHIATRY

We are developing an application of psychotherapy techniques used in the field of mental health through mobile and virtual reality glasses using virtual reality (VR) technologies.

VOCTOR PHYSIOTHERAPY

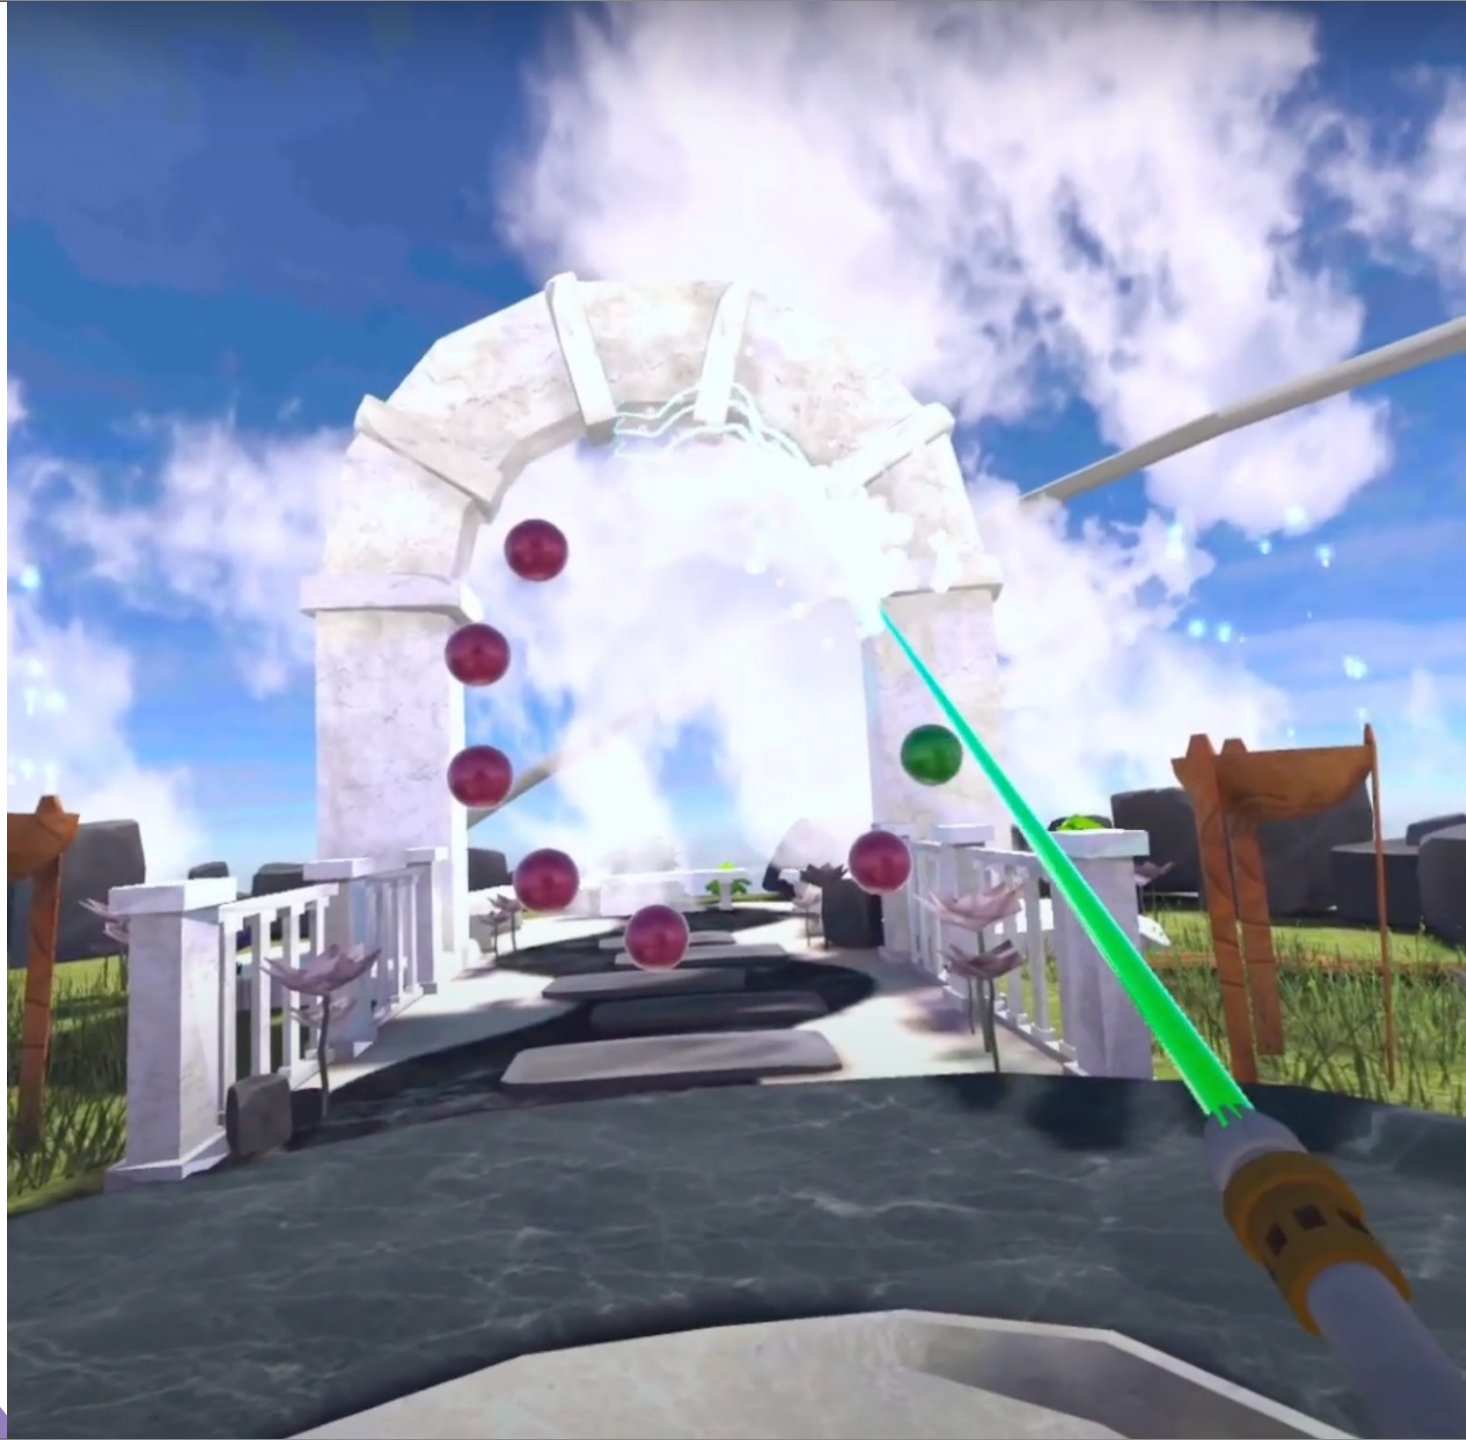

We are developing virtual reality-mediated rehabilitation gamification. It is presented via portable virtual reality glasses and aims the whole-body exercises. We have games on the upper extremity, lower extremities, balance, cognitive rehabilitation, and pain management.

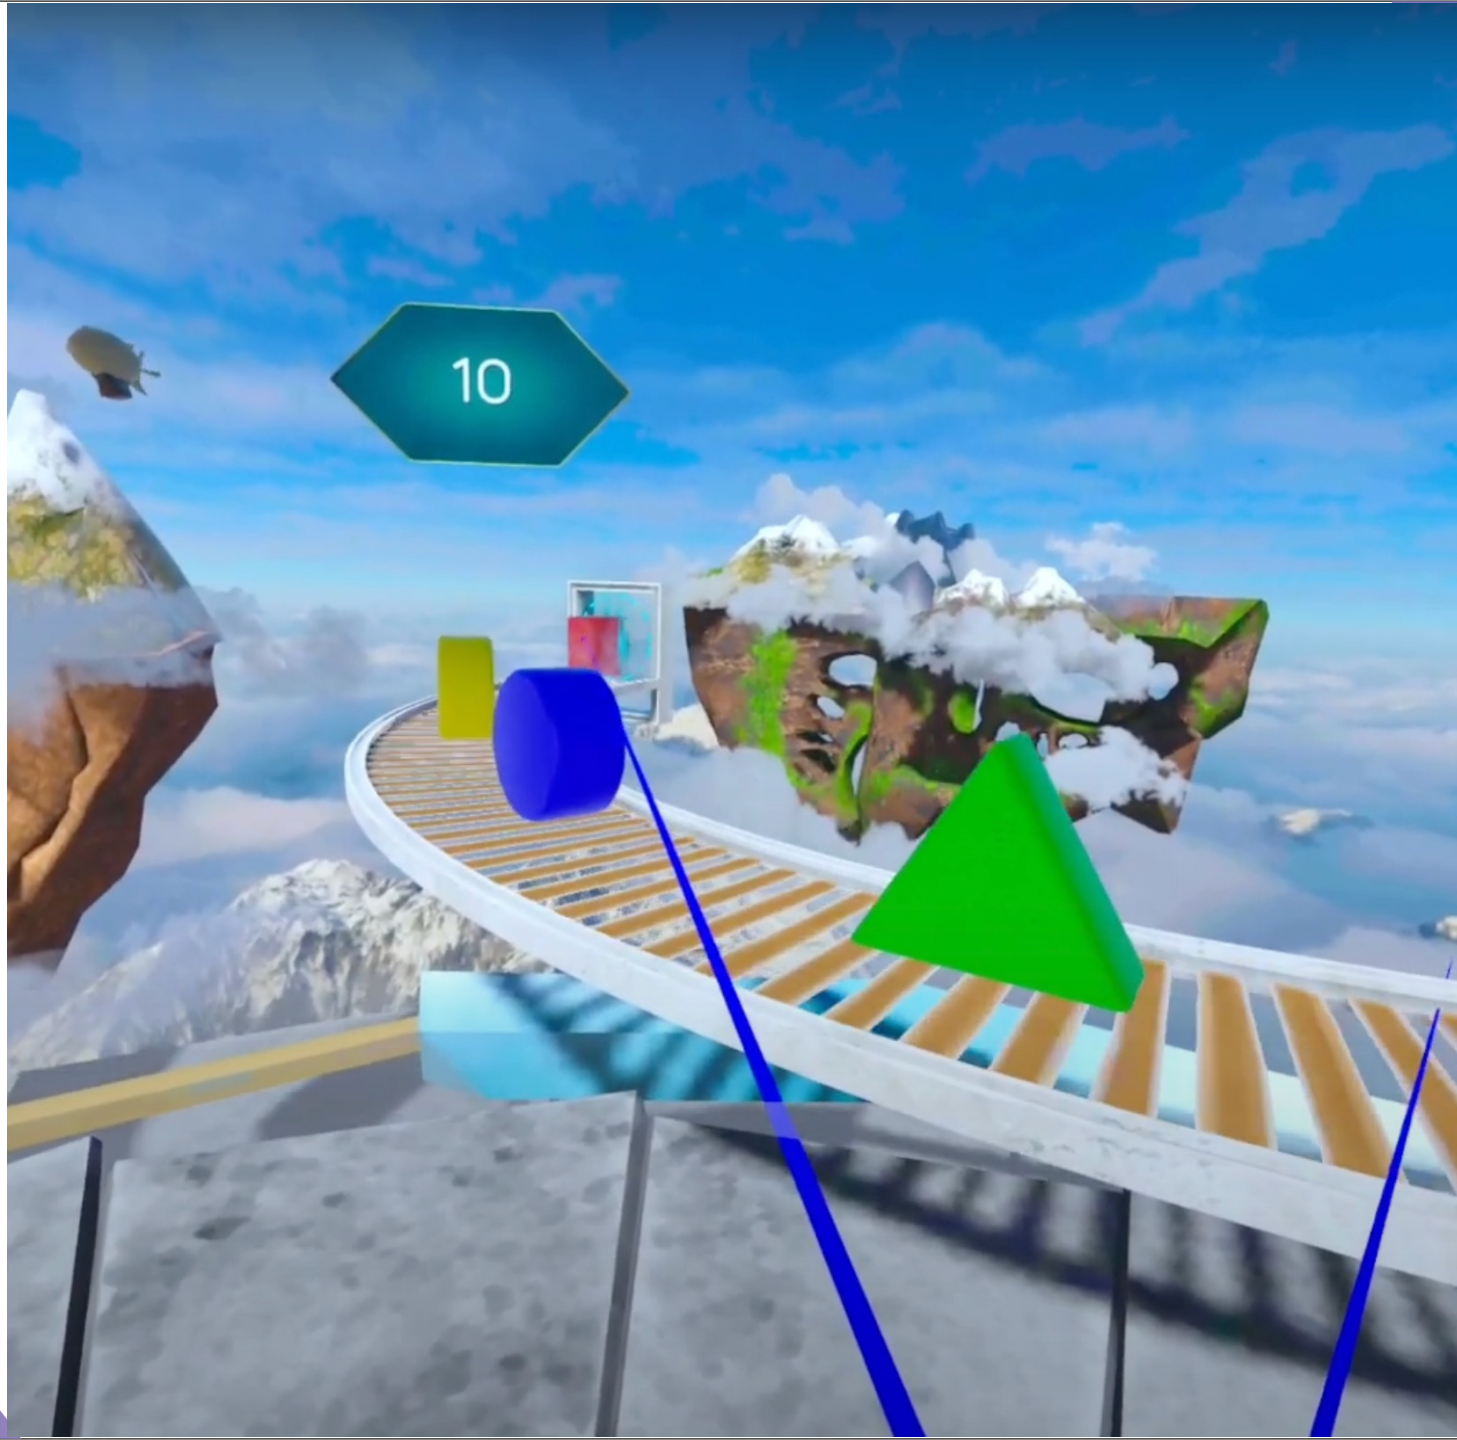

VOCTOR PHYSIOTHERAPY

In addition, we have opportunity to evaluate the functional levels of patients remotely via virtual reality. We evaluate the primary functional status of patients such as hand functions, cognitive levels, and balance functions with virtual reality, and recommend personalized rehabilitation programs. We monitor the real-time movement data of patients while playing games and monitor their functional status remotely.
