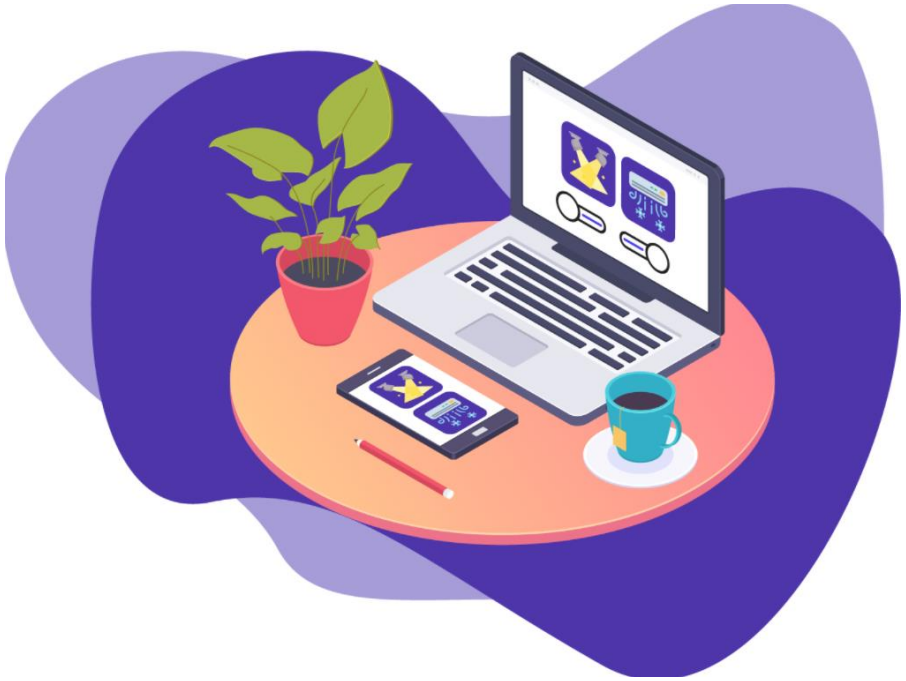
Offers a cyber security and password reset solution that allows the employees to reset their passwords on third party applications like AS, SAP, Enocta, AS/400, Oracle on their own without needing the help of the IT department.

PEAKUP

NOA

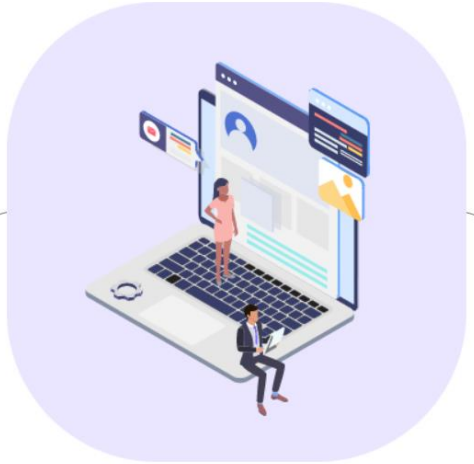


NOA: Energy Monitoring and Facility Management
Prepares the necessary environment for the creation of low energy consumption, data-driven workplaces and sustainable environmentally friendly offices.

PEAKUP

Step 1: Emission Impact Dashboard

The Emissions Impact Dashboard allows you to measure the impact of many Microsoft 365 services like Exchange Online, SharePoint Online, Teams, and more on your company's carbon footprint, and break down emissions by service and data center. Once you add the Emissions Impact Dashboard to Power BI, you can measure your company's carbon footprint based on the data. Discover how you contribute to the environment by configuring an app in a fraction of time.



Step 2: Microsoft Sustainability manager

By connecting the applications and processes used in your company to the Microsoft sustainability manager, you can measure the total impact of your organization, conduct periodic and annual analyses and create advanced reports. The sustainability manager analyzes a wide range of data from IoT devices to local IT resources in accordance with international standards and supports you in creating your roadmap for sustainable working environments.
