ABOUT US

EGELİ POLİSAJ company started its business life as a trading company in 1989. In 1993 it started production of polishing and abrasive products for different industrial applications. Our company developed in line with the industrial demands and in 2005 we moved to our own factory building in ITOB Organized Industry Region. Our company continued to develop itself in the field of industrial abrasive products, and additionally in the year 2014 we decided to start the production of wooden garden furniture and baby cribs under the brand names “Bahçedecor” and “Bebedecor”.

Creating “Bahçedecor” brand was reasonable as there was a lack of garden furniture in Turkey that could correspond to the increase of peoples’ wealth and income levels. Turkish Furniture Industry was quite successful in production of home furniture for both Turkey and its neighboring countries, but apart from a few successful companies in garden furniture, it could not raise a very significant manufacturer. Being aware of this gap, our company focused on this subject and aimed at contributing to the elimination of this shortage. Our aim is to use nature-friendly materials in their most natural form and present them to our consumers with care and respect. We avoid equipping our products with unnecessary functions to prevent the increase in prices. Our goal is to produce long-lasting robust garden furniture that will bring together different generations. Of course, we carefully select our business partners who will act as a bridge in the delivery of this furniture to the consumers. Apart from classic products such as tables / chairs, our designers’ priority is to create solid wood accessories that will make life more enjoyable.

MATERIAL

IROKO WOOD

At Bahçedecor for production of our furniture we use a special type of “iroko” tree. With its high resistance to outdoor conditions such as water, moisture and sun, iroko is an exotic tree species that is especially preferred in outdoor furniture used in such places as poolside, garden and landscape areas, yachts, dry and wet grounds.

Due to its strong, hard, oily and high density structure, iroko wood is a very durable raw material. It is resistant to natural rot, insects and diseases. Thanks to its durable structure, iroko wood provides long-lasting use and does not deform after processing.

MATERIAL

STAINLESS STEEL

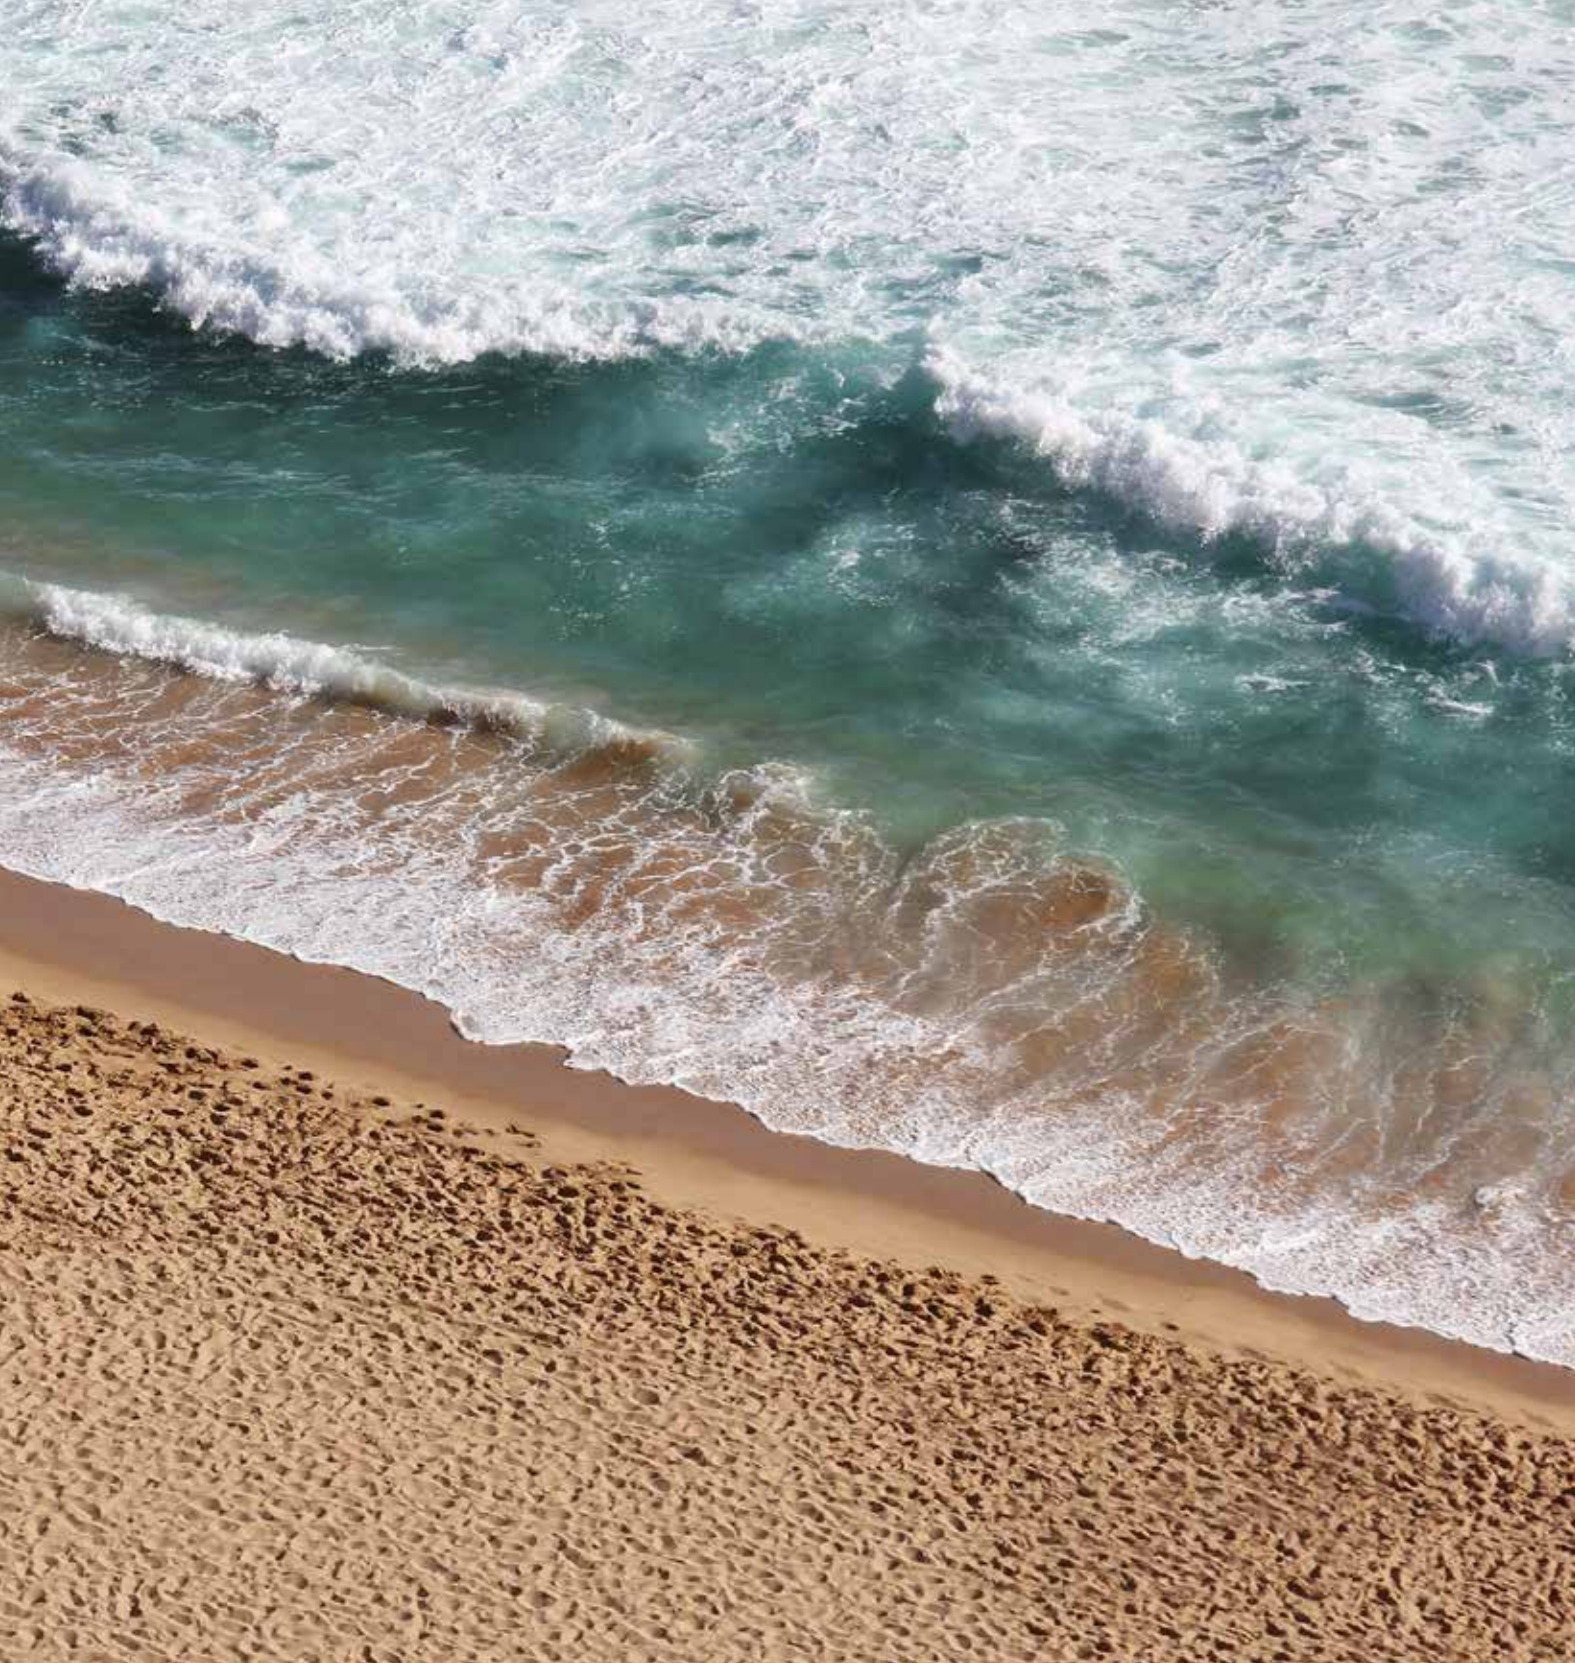

At Bahçedecor in the new season we are presenting our new products combining functionality and visuality with a modern lifestyle. We complete our collection with a very durable material stainless steel.

Stainless steel, which is very easy to clean, increases the comfort of your pleasant environment with its resistance to all weather conditions. It is resistant to rusting and provides long-lasting use. It is an environmentally friendly material that can be completely recycled.
