DATKA Clamp Saddles are designed by making improvements for easy usage of the last user while considering the lack in the features of the products available in the market. It provides excellent leakproof by the help of strengthening has been made on its body and o-ring system. In order to ease working in the difficult field conditions Bolt Holder Nail System has been improved to prevent the fall of the bolts when they are in upsidedown position. Tightening bumps have been located on the inside surface for the purpose of fixing the pipe's rotation. Thanks to its gasket system designed in concave form, it prevents any problem may occur due to size differences in pipe diameters up to ± 0.5 mm or ovality.

• Bolt Holder Nail System and Pipe Fixing Tightening Bumps are only available in single outlet clamp saddles concerning their manufacturing technics. •
