## COŞKUN ARITIM

We are proud to work with you together for solving environmental problems. Our Company uses the technology which provides solutions by keeping them up to date. We are thankful to you for your trust and choosing us. We look forward to providing you with the best products and service.

*En iyisini yaparız.*

**We do the  
best.**

# OUR QUALITY POLICY

The foundation of our quality policy is to adopt reliability and friendliness as the fundamental quality understanding. It is the initial priority of our policy to continue our business in this direction by taking precautions by taking advantage of all the blessings brought by technology and times, while at the same time considering customer satisfaction and possible demands and new requests in advance.

Quality, responsibility, and customer satisfaction are at the forefront of our principles. Our company is aiming to be a lead in the field with its understanding of "high quality" created by the overall quality management system.

One of our main targets is to prioritize reliability and honesty in the services we provide, to recognize the needs of our customers in advance, to create added value, and to ensure a high level of customer satisfaction.

In order to be the flag bearer in product quality and customer satisfaction in parallel to the developments in the sector, the company pledges to organize continuous trainings and continuously improve the system in order to ensure that its employees, who are the basic element of the quality management system, serve with the same exact quality understanding.

best.**

# Our **VISION**

---

Using existing technologic developments, to produce more productive, quality and economic products and to eliminate the damage done to nature and environment. Being a pioneer in the environmental technologies sector with an innovative business system opening to new ideas.

# Our **MISSION**

---

To be a pioneer in solving environmental problems all over the world. To provide solutions for water and wastewater treatment and to make these methods available all over the world.

# Our **SERVICE**

## **COMPANY**

Our company carries out all its manufacturing activities within its own structure. The machine park within the production includes sheet metal cutting machines, sheet metal bending machines, cylinder bending, cnc machining centers, laser cutting machines, gas metal arc welding machines and argon welding machines. Our Annual production capacity is 950.000 tons. We produce innovative solutions in the field of engineering with experienced designers, environmental, electrical, and mechanical engineers. Our engineers plan facilities by making process calculations and mechanical calculations.

# Our PROJECTS

## MBBR Treatment Plant

Libya

Libya hospital project, for the treatment of hospital wastewater with a capacity of 400 m<sup>3</sup>/day. Fully automatic wastewater treatment plant designed by. The facility was designed based on European standards for outlet water quality.

## MBR Treatment Plant

Iraq

The treatment plant of the wastewater sourced from the hospital located in Baghdad, Iraq was designed by utilizing MBR technology. The plant was delivered turnkey with a capacity of 300 m<sup>3</sup>/day. Achieved treatment efficiency of 98%.

## SBR Treatment Plant

Albania

The wastewater treatment plant designed for the treatment of domestic wastewater from residential buildings was realized on the turn key basis as fully automated with PLC control.

# Our PROJECTS

Turkey  
Iraq

## Equipment Manufacture

In Istanbul's 3rd airport, İGA A.Ş. has chosen to work with our company within the scope of pre treatment. In order to prevent damage to pumps and mechanical equipment before the acceptance of wastewater from airplanes at the airport site, there is a mechanical fine screen for floating substances in the wastewater and a perforated belt screen afterwards.

## River Treatment Plant

To address the clean water problem in Najaf, Iraq, water is drawn from the river and purified at a rate of 3000 m<sup>3</sup> per hour before being delivered to the city supply line. The entire plant operates automatically under SCADA control. The facility was constructed as a turnkey project, including a water intake structure, settling tanks, a chemical dosing system, filtration, and pre and post chlorination.

## Odor Removal System

The bio-filter unit for the disposal of toxic gases produced by the Iraqi Mosul pumping station has been delivered turnkey. There are two types systems for removing the odor: carbon- and bio filters.

# GET IN TOUCH

We have been successfully realizing our project design, manufacturing, installation and service services for treatment plants to every point of the world since 2004. If you reach out to us, we are ready to provide support with our expert engineering team.
