...: about us :...

Atlas Elevator is a company specialized in selling, supplying, installing and maintaining high-quality electric and hydraulic elevators and escalators conforming to gulf and European standards and specifications.

the company was established in the state of kuwait and has been keen to comply fully with the standards and conditions of public safety and security, and as a result, it has been officially accredited by the General Directorate of Civil Defense extinguishing department as a company complying with the security and safety standards set by the department.

Atlas Elevators has introduced everything new and innovative in the world of elevators. It has become one of most important companies operating in the Arab Gulf market, where it opened branches in most of the Gulf countries (Saudi Arabia , Kingdom of Bahrain, Oman and Qatar).

As a part of the company's expansion and modernization of its products ,the company has signed commercial representation agreements with major international elevator companies. Working with partners around the world for years, the company has provided premium quality to the community.

Atlas Elevators work is based on the strategy of diverging its elevators according to international quality standards and providing them with modern aesthetic standards that meet the tastes of its customers.

Thanks to God, then by a team with extensive experience, ATLAS Elevators has made great achievements, the most important of which is the installation of more than 14,000 elevators at the level of the Arab Gulf states with high quality specifications in government installations, commercial complexes, apartment buildings, restaurants, hotels, villas and palaces.

The sales

ATLAS Elevators has the largest elevator showrooms in Kuwait, Saudi Arabia, Bahrain, Oman and Qatar

Fittingly to our customers, our experienced sales and reception staff are always ready to serve our customers and provide all the necessary information, and to answer all questions and inquiries of our customers and provide advice and recommendations.

At our showrooms, ATLAS Elevators offers its customers the opportunity to experience a real elevator before buying it. It also displays all parts and components of elevators to allow the components and know their brands, origin and specifications.

As a part of its commitment to provide everything that is modern and innovative in the world of elevators, "ATLAS Elevators" is constantly updating its designs that keep pace with the spirit of modernity according to aesthetic standards that meet all tastes of its customers.

The annual sales figures reflect the reputation of ATLAS Elevators in the market and the great confidence it has gained during its years of operation.

Elevator structure

The walls of the elevator well shall be of concrete or black brick with a thickness of at least 15 cm and clad on the inside with a layer of cement to prevent the accumulation of dust and insects

No cables, electrical panels or any equipment of the HVAC system, water pipes or sewage shall be placed inside the well except the elevator cables. Any inclination in the walls of the well should be excluded as it cannot be used to increase the elevator area.

Secure all electrical connections in the elevator well.

Installation of a main breaker with a capacity of 100 amp Three-sided, with a wire of a diameter of 6 mm.

Machine Room

In elevators that have a machine room, the room shall be at the top of the elevator well and the machine, control and speed regulator shall be placed in it. The following is to be considered:

The height of the room shall be not less than 220 cm.

Taking into account the full ventilation and installation of air conditioning.

Sufficient space to ensure proper distribution of room contents and to enable maintenance easy and safe access of the technicians to maintenance of equipment.

The room should be sealed and ensure that rain water and dust will not enter the room.

Prepare the appropriate floor of the machine to minimize vibrations resulting from operation and sound transmission across the floor.

Isolate the machine room in the case of the presence of adjacent residential units.
